Depending on how the driver is being installed, it may arrive as an update from Windows Update afterwards. Use the tool below to disable the driver update if this doesn't help.

To access this option, open the Control Panel by right-clicking the Start button and selecting Control Panel. Navigate to System and Security > System > Advanced system settings. Click the Hardware tab, click Device Installation Settings, and select the "No, let me choose what to do option. Select "Never install driver software from Windows Update."
